The pressed steel web of the fibre belt pulley failed during the preliminary belt test after approximately two hours of operation. This pulley was replaced with a cast iron one of the same size.

REMARKS

All results shown on page 1 of this report were determined from observed data and without allowances, additions or deductions. Tests B and F were made with carburetor set for 100% maximum horsepower and these figures were used in determining the ratings recommended by the A.S.A.E. and S.A.E. tractor rating codes. Tests C, D, E, G and H were made with an operating setting of the carburetor (selected by the manufacturer) of 96.5% of maximum horsepower.

Observed maximum horsepower (tests F & B) Drawbar 37.50 Belt 42.29

Sea level (calculated) maximum horsepower Drawbar 38.63 Belt 43.64
(based on 60° F. and 29.92" Hg.)

Highest permissible horsepower ratings Drawbar 28.97 Belt 37.09
(as recommended by A.S.A.E. and S.A.E.
codes)

We, the undersigned, certify that the above is a true and correct report of official tractor test No. 274.
